## PDLLPB Upgrade

Pacific Crest Corporation, the leading manufacturer of wireless communication equipment designed for position centric and environmental applications, has recently announced a new version of its well-known PDLLPB. This latest version features "auto power on", which enables the radio to automatically turn on after being connected to a power source.

The upgraded PDLLPB radio is type approved internationally and features 20MHz splits, no longer requiring 10MHz splits. This bandwidth consolidation improves the user's flexibility to select from a smaller pool of radio products that cover a larger range of frequencies and countries. This will benefit customers by simplifying their ordering, logistics, and inventory processes and procedures.

### **Sales Support**

For additional information about ordering the PDLLPB or other PDL products, please contact your regional sales representative or e-mail Pacific Crest Corporation at [sales@pacificcrest.com](mailto:sales@pacificcrest.com).
