

TM32 Product Discontinuation

General

The TM32 product line is being phased out in mid-2004 by Pacific Crest Corporation and replaced by the new EDL II product. The EDL II offers similar capabilities to the TM32 as well as many enhancements. The transition to EDL II is simplified because EDL II products provide "over the air" compatibility with the TM32.

Last Chance

The TM32 product line is being discontinued because several key components have become obsolete and continued production is difficult. TM32 products will be available for purchase from Pacific Crest Corporation through August 31, 2004. Purchases made on or before this date may be scheduled for future delivery through September 30, 2005. Orders scheduled for delivery after August 31, 2004, are non-cancelable and non-refundable.

Please note that the VHF version of the TM32 already has been discontinued and is no longer available for purchase from Pacific Crest Corporation.

New Alternative

The new EDL II is generally similar to the TM32 and offers many important improvements that reflect Pacific Crest Corporation's commitment to customers through ongoing product development. The EDL II product line has been designed specifically for use in SCADA and environmental applications and is compatible with TM32 communications systems. It features the same field-proven software as is used by the TM32, a rugged weather-proof enclosure, and unique ruggedized form factor. In addition, the EDL II is designed to mount to variety of antennas and can be installed both indoors and out.

Sales Support

For additional information about ordering the last available TM32 systems or the new EDL II product, please contact your regional sales representative or e-mail Pacific Crest Corporation at sales@pacificcrest.com.
